Education

Himalaya College of Engineering

Chyasal, Lalitpur

BACHELOR IN COMPUTER SCIENCE AND INFORMATION TECHNOLOGY (BSC.CSIT), Tribhuvan University

Graduation Date: 2020-2024

Skills

Major Skills React.js, React Native, Node.js, Express.js, MongoDB

Languages JavaScript, Python, PHP

Frameworks React, React Native, Node.js, Flutter, Laravel, Django, Next.js

Extras Firebase, MySQL, Version Control, MongoDB, Tkinter, Express.js

Experience

QwikIT Services

Front-end Engineer Intern (2 Months)

- Creating visually appealing and user-friendly web pages while seamlessly integrating them with backend systems to optimize performance and functionality, resulting in the successful delivery of projects that exceeded client expectations.
- Employed Next.js, Django, and React.js to craft dynamic web applications, merging server-side rendering with secure backend capabilities for scalability. Integrating React.js improved user experience and code maintainability, ensuring high-quality results meeting functional requirements and performance standards.

TokenPilot

Node + Python Developer (1 Month)

- Created trade bots using Python for market analysis and Node.js for real-time trading, harnessing their strengths for efficiency and adaptability in algorithmic trading. This integration exemplified the power of both languages in developing robust trading solutions.
- Learned algorithmic trading for efficient decision-making, exploring CCXT for market data analysis, and honing my ability to identify and look at market trends, ensuring better decision-making and knowledge in cryptocurrency trading.

SXC Sandbox

Hackathon (48 Hrs)

- Created a gaming website designed for kids to participate in competitive challenges, integrating a unique system where points earned can be redeemed for real money rewards. Additionally, strategic advertisement areas were implemented to facilitate financing through sponsorships and partnerships, ensuring sustainable growth and profitability for the platform.

Projects

EdEarn

- Crafted a real-time gaming platform enabling point redemption and subscription purchases through Khalti integration, enhancing user engagement and accessibility. This innovation aims to redefine the gaming landscape by combining entertainment, rewards, and convenience for users.
- Technologies: React, TailwindCSS, MongoDB, Nodejs, Express, Socket.io
- Link: <https://github.com/Prashan57/EdEarn>

Envision Nepal

- Designed a procurement website with a simplified user interface, prioritizing intuitive navigation. Leveraging modern web design principles, users can effortlessly navigate the platform for streamlined procurement processes.
- Technologies: React, TailwindCSS, MongoDB, Nodejs, Express
- Link: <https://github.com/Prashan57/Envision-Nepal>

Skin Disease Classification

- Developed a skin disease classifier using Keras and the DenseNet architecture in Python integrated with TensorFlow. This project involved training the model to accurately identify various skin diseases from image inputs, contributing to advancements in medical diagnostics. Through rigorous testing, the classifier demonstrates the potential to aid dermatologists and healthcare professionals in diagnosing skin conditions with greater accuracy and efficiency.
- Technologies: Nodejs, Express, Python, MongoDB
- Link: <https://github.com/Prashan57/Skin-Disease-Classification>

Meeting App

- Developed an application for meetings, incorporating chat and video call features. Utilizing the Jitsi-meet package, known for its reliable communication tools. With a user-friendly interface, it simplifies remote collaboration.
- Technologies: Flutter, Dart, Firebase
- Link: <https://github.com/Prashan57/video-room-app>

Notes App

- Developed an application focused on backend functionality, emphasizing CRUD operations for efficient data management. This project enabled me to refine skills in backend development, gaining practical experience in building robust systems.
- Technologies: Nodejs
- Link: <https://github.com/Prashan57/node-notes>

Chat App

- Developed a user communication app using Node.js, Express, and Socket.io, enabling real-time messaging and data exchange. This project enhanced my skills in backend development, particularly in creating an area for user interaction.
- Technologies: Nodejs, Express, Socket.io
- Link: <https://github.com/Prashan57/Nodejs-Chat-App>

Personal Portfolio

- Created a personal portfolio using MagicUI to showcase projects with a modern and user-friendly design. Additionally, I gained experience with Mantine and Material UI for building responsive and visually appealing interfaces.
- Technologies: Next.js, Node.js, MagicUI
- Link: <https://github.com/Prashan57/PrashanPrajapati-Homepage>
